

KHAT Podcast Website - Build Brief (for Claude)

Version: v1.0 | Date: February 02, 2026

1) Project Summary

Build a premium, Arabic-first KHAT Podcast website with a social-feed browsing experience and a 'philosopher library' vibe.

The site must provide value beyond YouTube via structured episode pages: summaries, takeaways, timestamps, quotes, resources, guest profiles, and curated collections. It must be fast, mobile-first, and SEO-friendly.

2) Goals

- Make the website the home of KHAT, not a YouTube mirror.
- Improve discovery: search, filters, collections/series, guest directory.
- Deliver non-YouTube value: written summaries, timestamps, quote library, resources hub.
- Grow owned audience via newsletter conversion.
- Enable community writing through KHAT Space with a moderation workflow.
- Lay the foundation for a future store without shipping checkout in MVP.

3) Non-Goals (MVP)

- Full user accounts and server-side saved data (use local saves in MVP).
- Open comments everywhere (Phase 2 only, gated and moderated).
- Full Clips Library and standalone Quotes Library (Phase 2).
- Store checkout and payments (Phase 2; foundation only).

4) IA / Sitemap (MVP)

- Home (feed-style)
- Episodes Hub (/episodes)
- Episode Detail (/episodes/[slug] or /episodes/[id])
- Guests Directory (/guests) and Guest Profile (/guests/[slug])
- Start Here (/start)
- KHAT Space: Articles Feed (/space), Article Detail (/space/[slug]), Write Article (/space/write) - stub or admin-only in MVP
- Collections/Series (/series)
- Resources Hub (/resources)
- Newsletter (/newsletter) - optional standalone page

- Sponsorship (/sponsor), Be a Guest (/guest), Contact (/contact), About (/about)
- Store placeholder (/store) - Coming Soon (feature-flagged)

5) Homepage UX (Feed-Style)

Homepage is a hybrid feed: social browsing (Instagram-like) without chaos. Cards are structured and always lead to a clear action.

- Sticky Top Bar: logo, global search, optional sign-in.
- Hero: Latest Episode card with CTA 'Open Episode Page'.
- Feed cards: Episode, Quote, Article/Insight, Start Here, Guest Spotlight, Store Teaser.
- Mobile bottom navigation: Home, Episodes, Space, Start, More/Profile (profile stub for MVP).
- CTA rule: every card drives Open, Save, Share, Read, or Subscribe.

6) Episode Detail Page (Core Value)

- YouTube embed (youtube-nocookie).
- Episode Summary (short + structured) and Key Takeaways (3-7).
- Timestamp Chapters (topic-based navigation).
- Quotes section (copy/share/save) and Resources Mentioned (books/links).
- Related Episodes (by topic or guest).
- User actions: Save episode/timestamp/quote, share episode/timestamp/quote.

7) Guests

- Guests Directory with search and filters.
- Guest Profile: bio, photo, links, episode appearances, key quotes.

8) Collections/Series (MVP Add-on)

- Curated pages that bundle episodes + key quotes + related articles.
- Examples: Relationships, Emotional emptiness, Meaning & identity.

9) Resources Hub (MVP Add-on)

- Global library of books and links mentioned across episodes.
- Filter by topic; each resource links back to episodes where it appears.

10) KHAT Space - Community Articles

Name: KHAT Space (Arabic name: Masahat Khat). Community writing with quality-first interaction and moderation.

- Phase 1: Likes, Saves, Shares + predefined reactions (Agree/Disagree/Added value/Needs clarity/Moved me).
- Optional short note can be enabled but must be moderated (or disabled at launch).
- Publishing workflow: Draft -> Review -> Published; Featured posts curated by admin.
- Phase 2: gated comments, reporting, moderation tools, auto-close on sensitive posts.

11) Store (Phase 2) - Foundation from Day 1

- Keep /store as 'Coming Soon' with feature flag and optional 'Notify me'.
- Create DB tables from day 1: products, product_variants, inventory(optional), orders, order_items, coupons.
- Phase 2: payments via a provider; never store card data on KHAT.

12) Data Strategy

- Auto-fetch from YouTube: title, thumbnail, duration, publish date.
- Admin enters KHAT-specific fields: summary, timestamps, quotes, resources, topics, series links.

13) Tech Stack (Decided)

- Next.js + TypeScript
- Tailwind CSS + component system
- Postgres via Supabase
- Hosting on Vercel
- Search via Postgres Full-Text Search (Phase 1)

14) Security Plan (Baseline)

- HTTPS + HSTS; secure cookies (HttpOnly, Secure, SameSite).
- MFA for Admin; RBAC roles (visitor/member/moderator/admin).
- Supabase RLS on all tables; strict input validation everywhere.
- XSS sanitization for user content; rate limiting and anti-spam for forms/posting.
- Security headers (CSP etc.) with safe YouTube embed allowances.
- Secrets via environment variables; logging/audit for admin actions; backups.

15) Design System (Colors - Option A)

Token	Hex
Background	#0B0F14
Surface/Card	#121A23
Elevated	#182332

Border	#223041
Text primary	#F3EDE2
Text secondary	#B8B1A6
Text muted	#8E8A84
Gold accent	#C9A24A
Purple signature	#6A4C93

16) Database Schema (High-Level)

- episodes: youtube_id, slug, title, duration, published_at, summary, takeaways, topics[]
- guests: slug, name, bio, photo_url, links[]
- timestamps: episode_id, seconds, title, keywords[]
- quotes: episode_id, text, speaker, topic, seconds_optional
- resources: episode_id, type(book/link), title, url
- articles: author_id, title, content, status(draft/review/published), tags[], published_at
- reactions: article_id, type, note_optional, created_at (user optional in Phase 1)
- leads: type(sponsor/guest/contact), payload, status, created_at
- store foundation: products, product_variants, inventory(optional), orders, order_items, coupons

17) Sprint Roadmap

- Sprint 0: foundation, design tokens, components.
- Sprint 1: core pages with mock data (home feed, episodes, episode detail, guests, start).
- Sprint 2: DB + Admin + YouTube metadata auto-fetch.
- Sprint 3: SEO/performance/forms/save+share + resources hub + collections/series.

18) Definition of Done (MVP)

- Admin can publish an episode with summary, timestamps, quotes, and resources.
- Home feed renders mixed cards and links correctly to episode/guest/article pages.
- Episode page clearly provides non-YouTube value (summary, timestamps, quotes, resources).
- Newsletter + sponsor + guest/contact forms store submissions.
- Fast mobile UX with SEO basics in place.
